

THE GRADUATION PORTFOLIO MAP

An evidence-based map of nine months of AI-assisted building, research and decision-system design

17

PUBLIC PROJECTS

5

SIGNATURE PROOFS

3 HR

FASTEST BUILD

THE PATTERN IS BIGGER THAN PROMPTING.

IT IS EVIDENCE-TO-DECISION BUILDING.

What the body of work actually proves

Ray repeatedly enters an unfamiliar domain, finds the consequential human decision, organizes the evidence around it and ships a reviewable working proof.

ORIGINALITY

The strongest work begins with lived curiosity or a real operator's vague problem—not a tutorial prompt.

TRANSFER

The method travels across terrain, law, science, governance, pursuit strategy and live decision support.

RESTRAINT

Confidence, missing evidence, fallbacks and human authority are visible in the best systems.

COMPRESSION

AI Draft Buddy proves the cycle can collapse from idea to tested, stateful product in three hours.

NEXT LEAP

Consolidate the strongest five, add external users and benchmark outcomes. Validation is now worth more than another prototype.

Proof over volume—and boundaries over hype

Review covered public repositories, source code, tests, product documents and the supplied Monahinga research record.

1

DECISION VALUE

Does it help a real person decide, prioritize or act?

2

ORIGINALITY

Is the framing recognizably Ray's—not merely a familiar demo?

3

EVIDENCE

Can a reviewer trace inputs, challenge claims and see uncertainty?

4

PRODUCT DEPTH

Are there real data paths, state, logic, tests, fallbacks and usable outputs?

5

PROFESSIONAL SIGNAL

Would it make the right employer, client or collaborator want a conversation?

6

VALIDATION

Has it been independently used or benchmarked? This is the largest shared gap.

#1 - #3

Ranked for distinctive professional signal after repository and document review. Every card is clickable.

1 Monahinga HUNTER

SIGNATURE

Terrain-and-wildlife decision support that ranks field setups and safer access choices.

Connects real DEM and public-land context, live regional wind, terrain features, parcel constraints and explainable scoring.

HONEST BOUNDARY Routes and behavior scores are scouting heuristics—not guarantees of animal behavior or legal access.

2 Bill X-Ray

SIGNATURE

Turns complex legislation into human language: effects, beneficiaries, authority, money and consequences.

Pairs readable synthesis with section-level receipts, adversarial lenses, citation audits and a fail-closed release posture.

HONEST BOUNDARY Decision support, not legal advice; consequential interpretations still require expert review.

3 Invisible Air Observatory

SIGNATURE

Makes terrain-influenced atmospheric movement visible and reviewable.

Combines terrain, wind, stability, steering, convergence and particle-path layers while separating measured, contextual and inferred evidence.

HONEST BOUNDARY A scientific review instrument—not methane detection, verified transport or an operational forecast.

#4 – #6

Ranked for distinctive professional signal after repository and document review. Every card is clickable.

4

Monahinga Site Insight

SIGNATURE

Transforms a selected place into terrain derivatives, 2D/3D surfaces and archaeology-review candidates.

Includes DEM source arbitration, terrain conditioning, relief products, object extraction and a browser presentation pipeline.

HONEST BOUNDARY It finds terrain patterns worth reviewing; it does not identify archaeological sites by itself.

5

PSI Pursuit Intelligence

SIGNATURE

Uses law and public records to detect pre-RFP need, qualification paths and ethical pursuit boundaries.

Separates verified statute, derived procurement sequence, hypotheses and unknowns—then builds an executive pursuit doctrine.

HONEST BOUNDARY The audited package proves the doctrine; full live opportunity automation remains a validation step.

6

Monahinga Lost-Spring Investigation

ORIGINAL RESEARCH

Reconstructs the likely location of a mineral spring absent from modern maps for roughly a century.

Triangulates survey notes, lake charts, newspaper history, deeds, parcel GIS, imagery and field observation.

HONEST BOUNDARY The locational case is strong; hydrology and some inherited historical traditions need expert validation.

#7 - #9

Ranked for distinctive professional signal after repository and document review. Every card is clickable.

7

AI Draft Buddy

3-HOUR BUILD

A stateful fantasy-football draft assistant for picks, roster constraints, scarcity and fast corrections.

Conceived and built in three hours; its package includes practice/live separation, undo, durable ledgers, roster logic, gates and extensive tests.

HONEST BOUNDARY The workflow passed 37 unit tests and 39 smoke checks here; predictive advantage is not independently benchmarked.

8

Governance Intelligence

STRONG SYSTEM

Parses SEC proxy and vote-result filings into governance signals and board-prep views.

Links 8-K vote rows to proxy language, exposes dissent and trends, and preserves raw-filing traceability plus confidence warnings.

HONEST BOUNDARY Matching and severity are transparent heuristics; flagged records still require raw-filing review.

9

Scout Horizon

STRONG PROOF

Turns life-sciences signals into an executive radar, boardroom brief and next-action review.

Shows how curated evidence, ranking, filters and decision narrative can compress a noisy strategic landscape.

HONEST BOUNDARY The public first impression is curated; live search depth depends on credentials and further validation.

#10 – #12

Ranked for distinctive professional signal after repository and document review. Every card is clickable.

10

Charge Ready Pursuit X-Ray

STRONG PROOF

Answers one go/no-go question: is a municipal charging opportunity worth three days of qualification effort?

Connects program rules, buyer evidence, funding, technical controls, company fit and human authorization in a cited packet.

HONEST BOUNDARY It qualifies attention; it does not authorize pursuit, estimate costs or submit a proposal.

11

Flood Action Lens

STRONG PROOF

Turns a local terrain box into an explainable flow, pooling and verification-priority brief.

Attempts real USGS 3DEP terrain first, records fallback state and keeps missing evidence plus the next human check visible.

HONEST BOUNDARY Terrain-conditioned review only—not flood prediction, evacuation, road safety, claims or official mapping.

12

Lenovo CRA Decision Control

TABLETOP

A Cyber Resilience Act incident tabletop with evidence states, clocks, gates and decision briefs.

Separates awareness, evidence, attestation and authorization while testing 24/72-hour clocks across synthetic operating models.

HONEST BOUNDARY A 71-test prototype—not a Lenovo product, legal opinion, live incident system or ENISA tool.

#13 - #15

Ranked for distinctive professional signal after repository and document review. Every card is clickable.

13

Klamath Restoration Review

TABLETOP

Organizes public geospatial evidence for human review of land and water transition after dam removal.

Shows source lanes, confidence verdicts and next actions instead of collapsing uncertain ecology into one claim.

HONEST BOUNDARY Documents a real-layer path; it does not claim ecological certainty or full production ingestion.

14

Agent Readiness Desk

METHOD PROOF

Checks whether a workflow is sourced, gated and reviewable before an enterprise agent is built.

Reframes agent design around evidence gaps, action boundaries, approval gates and a builder handoff packet.

HONEST BOUNDARY Synthetic data and a prototype readiness score; no claim of production validation.

15

Dragon's Tail

ORIGINAL LENS

A two-sided public decision room inspired by the safety lessons of the Demon Core.

Pairs concern and abundance cases with evidence burdens, change tests and moral safeguards.

HONEST BOUNDARY A source-lane reasoning scaffold; live retrieval, extraction and citation checking are not connected.

#16 - #17

Ranked for distinctive professional signal after repository and document review. Every card is clickable.

16

CLEARPATH UXO Intelligence

EARLY PROTOTYPE

A humanitarian geospatial concept for organizing historical context and UXO survey-review attention.

The mission, map workflow and restraint are compelling, and the app never pretends to detect or clear ordnance.

HONEST BOUNDARY The audited package still relies heavily on synthetic preview dots and limited seeded source depth.

17

Soul Coder Manifesto

FOUNDER DOCTRINE

Defines Soul Coding: AI-assisted building organized around the living essence of an idea.

Names the human contribution—curiosity, taste, purpose, challenge and judgment—and unifies the portfolio.

HONEST BOUNDARY A positioning artifact and doctrine, not an engineered decision system.

The portfolio is stronger than one ranking

Different artifacts win for different reasons. These are the most defensible superlatives.

BEST OVERALL SYSTEM**Monahinga HUNTER**

Real data, field judgment, constraints and unmistakable product identity.

BEST EVIDENCE ENGINE**Bill X-Ray**

Deepest traceable path from difficult sources to plain-English decision support.

BEST SCIENTIFIC BUILD**Invisible Air**

Most mature separation of model, evidence, uncertainty and visualization.

MOST ORIGINAL RESEARCH**Monahinga Lost Spring**

A genuine historical-geospatial investigation with an academic evidence chain.

BEST RAPID BUILD**AI Draft Buddy**

A stateful, tested operator workflow conceived and built in three hours.

BEST COMMERCIAL LENS**PSI Pursuit Intelligence**

Strongest conversion of statutes and weak signals into pursuit doctrine.

One method, six arenas

The domains change. The recurring operating pattern does not.

TERRAIN + FIELD

HUNTER | Site Insight | Flood Action Lens | Klamath

LAW + PUBLIC RECORDS

Bill X-Ray | PSI | Charge Ready | Governance Intelligence

SCIENCE + EXPLANATION

Invisible Air | Monahinga Lost-Spring Investigation

EXECUTIVE SIGNALS

Scout Horizon | Agent Readiness Desk | Lenovo CRA

LIVE OPERATOR SUPPORT

AI Draft Buddy

FOUNDER DOCTRINE

Dragon's Tail | CLEARPATH | Soul Coder Manifesto

What compressed over nine months

1

MAKE THE IDEA VISIBLE

Early public surfaces made concepts tangible enough to challenge.

2

CONNECT REAL SOURCES

Maps, statutes, filings, weather, terrain and records replaced generic data.

3

BUILD THE DECISION

Interfaces began ranking options, showing consequences and stopping at human authority.

4

BUILD THE GUARDRAILS

Unknowns, confidence, fallbacks, citations and adversarial checks became features.

5

BUILD THE TEST HARNESS

Smoke tests, state recovery and release gates accelerated iteration.

6

TRANSFER THE METHOD

The same reasoning architecture now crosses domains without pretending they are identical.

What this portfolio says Ray can teach

The strongest teaching claim is not 'how to prompt.' It is how to move from ambiguity to proof.

RAPID PROTOTYPING

Turn a vague human problem into a bounded working product and decision-ready first screen.

RESEARCH SYNTHESIS

Build a source hierarchy, preserve provenance and separate facts from derived judgment.

EVIDENCE-TO-DECISION DESIGN

Convert complex inputs into options, consequences, confidence, blockers and next action.

TEST + DEBUG LOOPS

Use smoke tests, failure states, release gates and full-system passes to accelerate safely.

HUMAN-GUIDED AI

Let AI expand speed and range while the human owns taste, purpose, challenge and accountability.
